

What's the difference?

Dry Blasting vs. Liquid Bead

Traditional Dry Blasting:

Media imbeds into material

Media wears out after each use

Dry blasting removes base material from parts

Dry blasting results in a rough finish, even with fine abrasive

Dry blast cabinet windows wear out from pitting and require costly lens covers

Traditional blasting wears out cabinet nozzles and tips

Almost No Consumables!

Liquid Bead Blasting:

Media does not imbed into material

Media lasts **10 times** as long

Liquid bead blasting does not damage or remove base material

Liquid bead blasting results in a smooth finish

Liquid bead blasting does not damage windows

Our nozzles come with a **LIFETIME WARRANTY**

The best part?

NO DUST!

MODEL 500

KEY SPECS
